

BlueJeans Meetings in the Browser

One-click video, audio, and web conferencing meetings right from your favorite browser

BlueJeans Meetings in the Browser offers a download-free experience for meeting attendees that's fast and simple with no app installation required. This zero download experience is ideal for meeting participants who prefer not to install software on their desktops or who work in locked down environments.

No download, no installation, no hassle

Using WebRTC (web real-time communications), BlueJeans enables browser-based video, audio, and web conferencing with no plugins or software downloads and installations required. BlueJeans browser-based meetings work with Chrome, Firefox, Safari, Opera, Internet Explorer, and Edge browsers on PCs and Macs.

Fast and friction-free meetings

There's no account registration required so connecting with anyone for a meeting is only a click away. Intelligent Join™ ensures that first-time meeting participants can bypass download requests and be entered directly into the appropriate browser-based meeting, eliminating potential join bottlenecks.

Features and tools to enhance your communications

BlueJeans Meetings in the Browser deliver a fully immersive experience. Your meetings capabilities include multi-point video, spatial audio, bi-directional content sharing, text chat, and cloud recording.

2019 WebRTC Product of the Year

BlueJeans Meetings in the Browser

KEY FEATURES

Consistent and Unified BlueJeans Experience

BlueJeans Meetings in the Browser was designed to mirror the BlueJeans desktop and mobile applications and ensure consistency across the BlueJeans meetings platform. By focusing on simplicity and ease-of-use, users enjoy the same interactive BlueJeans experience, regardless of how they join a meeting.

Immersive User Interface

Edge-to-edge video, disappearing controls, and an easy-to-use audio/video preference manager ensures that browser-based meeting attendees are able to focus their attention on the meeting at-hand, not a laundry list of menus and features.

Intelligent Join™

When scheduling meetings with external parties, meeting hosts may preselect whether attendees will be directed to download the desktop client or placed directly into a browser-based meeting. This capability de-risks meeting scenarios where a host is unsure how other attendees are able to join a meeting.

Spatial Audio

BlueJeans Meetings in the Browser provides meeting attendees with a complete spatial audio experience that helps users distinguish between two individuals talking at the same time and allows them to easily separate out non-relevant noises, like typing or knocking.

Cloud Recording

Record your BlueJeans meetings (including video, audio, and shared content), and easily distribute recorded video calls that can be replayed at the viewer's convenience.

KEY USE CASES

- Sales leaders and reps can schedule virtual sales calls confident that their prospects can attend, even from locked-down environments.
- HR leaders and recruiters can schedule virtual interviews secure in the knowledge that candidates can join.
- Marketing leaders can confidently conduct virtual press briefings and analyst calls, knowing their audience can join and see the content.
- Customer service teams can have frictionless support calls, knowing their customers will not need to download software.

SUPPORTED WEB BROWSERS

BlueJeans in the Browser is compatible with today's leading browsers.
